

MOLDINGS AND VENTS

Designed to meet all your decoration needs, MERCIER moldings are available in a multitude of stains, finishes and platforms. You will find the moldings to match your floor, whether it's in the ORIGINS, DESIGN+, Nature, Exotic or Elegancia Collections.

MOLDINGS

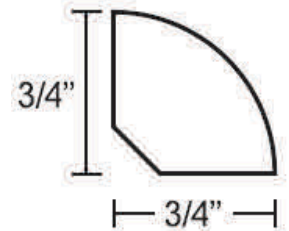

T-MOLDINGS

For a smooth transition between floors in adjoining rooms, T-moldings are the best option. They are ideal in doorways and between two different floor covering of near identical heights or thickness.

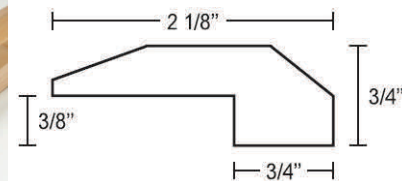

QUARTER ROUNDS

Placed between cabinetwork and hardwood flooring, quarter round moldings create a sense of continuity. They are also great to use as a subtle transitions between hardwood floors and wall bases.

THRESHOLDS

Threshold moldings are used in doorways and at the meeting point of floor coverings (nailed or glued) that are at different levels. They are suitable for wood floors, tiles or carpets.

REDUCERS

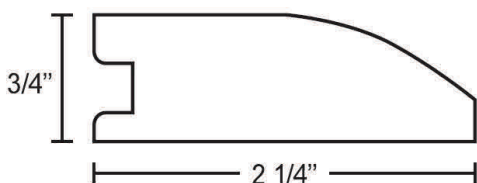

Reducer moldings are made to create a subtle connection between two floors of slightly different levels. They are ideal to connect wood flooring to vinyl covering or to short-haired carpet. Depending on your specific needs, they can be installed in a flush, overlapped or bi-level manner.

STAIR NOSINGS

Stair nosings provide a distinguished appearance to the steps of your hardwood stairway. They reduce damages caused by frequent circulation, hence preserving the beauty of your stairs. They can be installed in a flush, overlapped or bi-level manner, depending on the design of your stairway.
